

You could help us learn more about emotional well-being during COVID-19.

Researchers at Seattle Children's want to learn about the impact of COVID-19 on the emotional health of children and teens. This research study is for kids and parents.

Research is always voluntary!

Would the study be a good fit for me?

This study might be a good fit for you if your child or teen is between 8 and 14 years old and they have:

- Autism spectrum disorder (ASD)
- Attention-deficit/hyperactivity disorder (ADHD)
- Anxiety
- None of these

What would happen if I took part in the study?

If you decide to take part in the research study, you and your child would:

- Fill out online surveys every 6 months for 2 years.
- Surveys focus on children's feelings, behaviors, and relationships, and the ways that COVID-19 might affect them.

Families who take part can choose to enter drawings for gift cards to thank them for their time.

To take part in the CARR research study or for more information, please contact our study team:
